

TECHNICAL DATA SHEET

GRAVELLOCK – interlocking green roof trim

GravelLock is a discreet, interlocking aluminium profile for perimeter retention of ballast or sedum in green roofing systems. With a simple integral connection **requiring no separate connecting pieces for straight sections**, the system provides ample support to the green roofing materials whilst allowing for drainage through the slots in the vertical face.

Private label and bespoke enquiries are welcomed.

BENEFITS

- Integral interlocking joint requires no extra connecting pieces for straight sections
- Discreet termination to the ballast or sedum on the roof
- Large base design for stability
- Convenient, rapid installation
- Lightweight and robust
- Easily cut to length on site
- Slotted sections allow for drainage
- Simple connection piece for angles and corners
- Made from corrosion resistant aluminium
